

Movie Night at the Grange – 5/31/2013

Join us Friday night, May 31 at 7pm at the Aromas Grange Hall for a showing of “Do The Math” from 350.org. (No potluck this time! But local snacks will be served!)

“If it’s wrong to wreck the climate, it’s wrong to profit from that wreckage,” says Bill McKibben of 350.org and creator of, “DO THE MATH”. Transition Aromas will be screening this inspiring new film at the Grange Hall on May 31st at 7pm and it is one you won’t want to miss. **This film will leave you so excited you will want to talk to your friends about it and take action.**

2012 was the hottest year in the United States since scientists started keeping records. While we are working to stop fracking in Monterey and San Benito counties and the state of California, the fossil fuel industry already has identified reserves that add up to five times more coal, oil and gas than it is safe to burn. **If we let them execute their business plan, they will lock us into a future that we cannot survive.**

“This is the biggest emergency the human family has faced since we came out of the caves,” Van Jones says in this film, and he’s right. **If we don’t rein in the burning of fossil fuels, nothing else we do will matter. If you have kids, care about kids or are a kid then the future matters to you: you can’t afford to miss this event.**

Transition Aromas May Movie Night – May 31 – Aromas Grange Hall – 7pm

“DO THE MATH” from 350.org

“If it’s wrong to wreck the climate, it’s wrong to profit from that wreckage,” says Bill McKibben of 350.org and creator of, “DO THE MATH”. Transition Aromas will be screening this inspiring new film at the Grange Hall on May 31st at 7pm and it is one you won’t want to miss. This film will leave you so excited you will want to talk to your friends about it and take action.

2012 was the hottest year in the United States since scientists started keeping records. While we are working to stop fracking in Monterey and San Benito counties and the state of California, the fossil fuel industry already has identified reserves that add up to five times more coal, oil and gas than it is safe to burn. If we let them execute their business plan, they will lock us into a future that we cannot survive.

“This is the biggest emergency the human family has faced since we came out of the caves,” Van Jones says in this film, and he’s right. If we don’t rein in the burning of fossil fuels, nothing else we do will matter. If you have kids, care about kids or are a kid then the future matters to you: you can’t afford to miss this event.
